Memo to File

RE: Drilling postponement of
ground-water monitoring well
Geokinetics Inc.
ACT/047/019
Uintah County, Utah

Mr. William Sharrer of Geokinetics Inc. called this office on November 15, 1983 requesting a temporary drilling postponement for the completion of the last (deep) ground-water monitoring well situated within proposed well cluster No. 6. This well is one of 18 monitoring wells currently being drilled on Geokinetics properties.

Due to monetary, weather and time constraints, Mr. Sharrer requested postponement until sometime next spring to redrill and complete this well. Apparently, the well was drilled and during the case grouting activities the hole and/or case collapsed prohibiting use of this hole for monitoring purposes.

Well cluster No. 6 is located furthest to the south on the properties and projected development and burning of the in-site retorts in this area is 6 to 7 years down the line. It is felt this postponement will still allow ample time to assess baseline information for this deeper water bearing zone and approval was granted.
